Main Causes for Low Back Pain:

- ◆ Declining activity level
- ◆ Prolonged Sitting
- ◆ Poor Postural Alignment/Asymmetry
- ◆ Muscular Imbalances
- ◆ Poor Core Muscle Strength
- ◆ Habitual Faulty Movement Patterns
- ◆ Genetic Predisposition
- ◆ Skeletal Anomalies

Osteoporesis® Pilates

How can we walk, talk, breathe and be continent?

Paul Hodges

TheraPilates® Physical Therapy Clinic
920 47th Avenue
Santa Cruz, CA 95062

TheraPilates® for Low Back Pain

“The spine is inherently unstable. The body cannot be supported without the surrounding ligaments, discs and surrounding muscles.”

Paul Hodges

TheraPilates® Physical Therapy Clinic
920 41st Avenue
Santa Cruz, CA 95062

Sherri R. Betz, PT, DPT, PMA®-CPT

What is *STABILITY*, anyway?
“Stable Ability”

Alastair Greetham, PT

Occurs when a substance is in a dynamic equilibrium with its environment (Chemical)

TheraPilates® Physical Therapy Clinic
920 41st Avenue
Santa Cruz, CA 95062

Hodges....on Stability

“Stability is optimal when muscle activity is controlled with sufficient finesse to maintain controlled movement and postures in a manner that is matched to the demands of the task.”

Paul Hodges

What about the “Powerhouse”

Also “Box” coined by Bob Liekens

Figure 9 Increased pressure within the powerhouse...
Fig. 9 demonstrates how leaning in a deep breath and holding it for long causes an increase in the mechanical pressure of the thoracic cavity. The dropping of the diaphragm against the soft tissue of the abdominal cavity causes an increase in the pressure within the abdominal cavity as well. The result is a more rigid, i.e., more stabilized core. The muscles of the abdominal wall must be sufficiently strong enough to be able to contain this pressure.

Muscolino JE, Cipriani S. Pilates and the “Powerhouse”: *I. J Bodyw Mov Ther.* 2004;8:15-24.

3 Main Categories of Spine Dysfunction

- Stiff, tight (DJD, DDD)
- Hypermobility/Instability (Spondylolisthesis, Facet Syndrome)
- Pelvic Girdle Dysfunction (Sacroiliitis, Pelvic Asymmetry, Leg Length Discrepancy, Scoliosis)

www.TheraPilates.com 888-229-5334

Santa Cruz, CA 95062

1. Stiff/Tight Category

- Poor Lumbar Flexion
- Decreased curve reversal of lumbar
- Excessive thoracic flexion
- Likely tight hamstrings
- Likely has poor abdominal strength and excessive lumbar recruitment

www.TheraPilates.com 888-229-5334
©Copyright TheraPilates 2019

TheraPilates® Physical Therapy Clinic
920 41st Avenue
Santa Cruz, CA 95062

2. Hypermobility/Instability

- High Beighton Score
- Increased lumbar lordosis and/or kyphosis
- Poor core control
- Likely tight hamstrings
- Likely has poor core control

Beighton Score for Hypermobility Syndrome

1. Passive dorsiflexion/hyperextension of the 5th MCP joint past 90°
2. Passive apposition of thumb to the flexor aspect of the forearm
3. Passive hyperextension of elbow past 10°
4. Passive hyperextension of knee beyond 10°
5. Active forward flexion of hips with knees straight and palms to floor

TOTAL ____ / 9
(0-3 = Normal, 4-9 = Ligamentous Laxity)

Santa Cruz, CA 95062 **24**

Simple Screen for PF Problems:

Can you stop the flow of urine midstream?
 (Avoid doing this regularly)
 (Avoid doing first thing in the morning)

Do you have difficulty initiating micturition?
 (May suggest hyperactivity or hypertonicity)

Does your stream stop and start?

Do you have pain or discomfort?

Do you hover?

Do you lose control when coughing or sneezing?

www.TheraPilates.com 888-229-5334

 920 41st Avenue
 Santa Cruz, CA 95062 **25**

Posture (Bony Alignment)

Sitting is different than standing posture

Most people think that good posture is to extend everything!

Women have more lordosis than men in sitting.

Lumbar spine is generally flat in sitting

www.TheraPilates.com 888-229-5334

 920 41st Avenue
 Santa Cruz, CA 95062 **27**

Postural Correction

Forward Head-Shuts off the abdominals.
 Correction is not just a straight retraction, it's a scoop and lift. When done correctly, the abdominals will fire.

Thoraco-lumbar junction extended: connect distance from bottom of sternum to belly button. Breathe into hands at TL junction

Bring rib cage over the back of the pelvis

**Corrections feel weird but comfortable*

www.TheraPilates.com 888-229-5334
 ©Copyright TheraPilates 2019 TheraPilates® Physical Therapy Clinic
 920 41st Avenue
 Santa Cruz, CA 95062 **28**

Axial Elongation

Axial Elongation helps to distribute and minimize shear forces at each vertebral segment, facet joints and sacroiliac joints.

Decreases dependence on inert or passive (ligamentous, bony, and capsular structures) for stability

Minimizes wear and tear of cartilaginous surfaces of joints

www.TheraPilates.com 888-229-5334
 ©Copyright TheraPilates 2019 TheraPilates® Physical Therapy Clinic
 920 41st Avenue
 Santa Cruz, CA 95062 **29**

Posture Work

- Encourage "release" into optimal curve... not forced.
- Shift weight forward and back on feet, feel abdominals fire.
- Rock pelvis forward and backward to dissociate pelvic from thoracic motion with weight over IT's
- Post Tilt: Weight behind each IT
- Ant Tilt: Weight in front of each IT

www.TheraPilates.com 888-229-5334
 ©Copyright TheraPilates 2019 TheraPilates® Physical Therapy Clinic
 920 41st Avenue
 Santa Cruz, CA 95062 **30**

Posture Work

- Shift ribcage forward and backward to stack over pelvis-feel abdominals fire when correct
- Lift ribcage out of pelvis
- Draw throat back to correct forward head posture-feel abdominals fire when correct
- Lumbar muscles are relaxed when correct

34

Neutral Spine: Optimal Alignment

- Optimal spine & pelvic position
- Most stable posture-not natural!

Position is slightly different for everyone

- General cervical lordosis, thoracic kyphosis and lumbar lordosis
- All segments: disc spaces, facet joints, foraminal openings, sacro-iliac joints and pubic symphysis bear an equal distribution of forces.

39

Hollowing vs. Bracing

We teach people to activate muscles in isolation to provide a training stimulus to make the system modify.

Contraction of only TrAb: get pushing up of the diaphragm and descent of the PF

Lot of studies where people are asked just to contract the transversus....they have completely missed the point.

Paul Hodges

www.TheraPilates.com 888-229-5334
©Copyright TheraPilates 2019

TheraPilates® Physical Therapy Clinic
920 41st Avenue
Santa Cruz, CA 95062

40

Hollowing vs. Bracing

With "bracing" you get descent of the pelvic floor. Can lead to incontinence or PF weakness.

Bracing limits diaphragmatic motion.

Hollowing is meant to be a "drawing in" of the lower abdominal wall.

Often makes people "suck in", close the epiglottis and lift the ribcage.

41

Pilates Teaching...

Be careful not to over recruit the TA, or abdominal wall.

Check the outcome of your training techniques.

Avoid over recruitment of external obliques

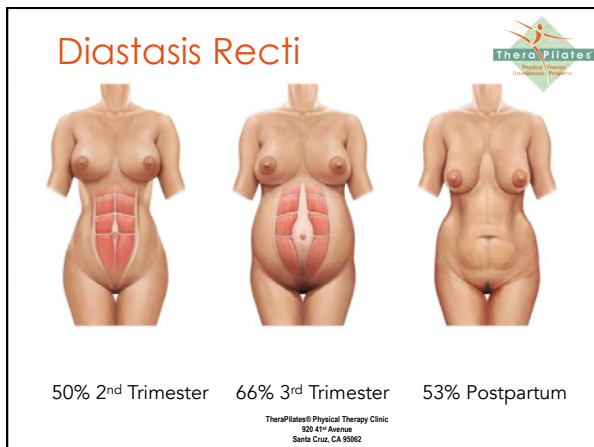

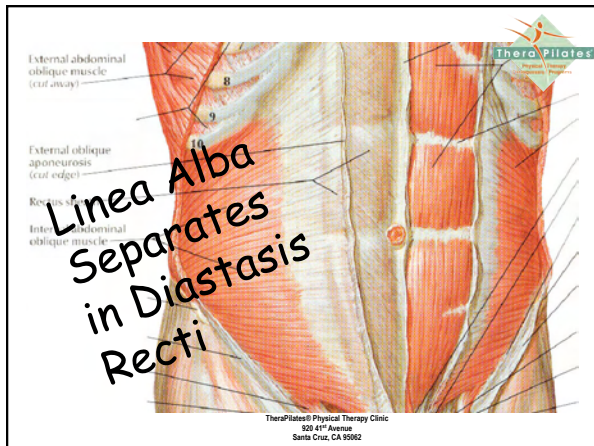

Avoid excessive forced inspiration/expiration-make the breathing match the movement demand.

Avoid forcing client into posterior tilt or flat back position even with long lever exercises.

www.TheraPilates.com 888-229-5334
©Copyright TheraPilates 2019

TheraPilates® Physical Therapy Clinic
920 41st Avenue
Santa Cruz, CA 95062

42

Pilates Teaching...

Ask the client what is in their mind when they try to attain good posture. You might be surprised at what they “think” you said!

Always check in with them about the mental cues they give themselves.

When pain occurs during an exercise, teach the client to have better control and see if that changes the pain

TheraPilates® Physical Therapy Clinic
 920 41st Avenue
 Santa Cruz, CA 95062

52

Trunk Assessment:

Bridging: Able to articulate equally through the spine, ASIS level; at top maintains alignment of shoulder, ribs, ASIS, knees
 **Single Leg Bridging: able to lift one knee to ceiling and maintain alignment of pelvis
 **Very important for Pelvic Girdle Dysfunction

Sidelying: (Sidekick with Bent Knee): Able to bring hip into flexion and extension without losing neutral spine/pelvis

www.TheraPilates.com 888-229-5334
 ©Copyright TheraPilates 2019

TheraPilates® Physical Therapy Clinic
 920 41st Avenue
 Santa Cruz, CA 95062

53

Trunk Assessment:

Sidelift: On elbow in Sidekick position, ankles, knees, hips, pelvis & spine in neutral, good scapular organization.

1-Unable to lift hips
 2-Lifts hips but needs upper hand for support
 3-Lifts hips 3" but cannot maintain neutral spine/pelvis
 4-Lifts hips 3" with top arm extended up
 5-Lifts hips 3" with top arm and leg lifted

www.TheraPilates.com 888-229-5334
 ©Copyright TheraPilates 2019

TheraPilates® Physical Therapy Clinic
 920 41st Avenue
 Santa Cruz, CA 95062

54

Trunk Assessment:

PSIS: Check for asymmetries
 Prone Unilateral Hip Extension: Able to lift one leg at least 10° in pelvic neutral without sacral rotation or lumbar rotation/sidebending (often painful in SI joint)
 Prone Bilateral Hip Extension: Able to lift both legs into hip extension at least 5° without losing pelvic/lumbar neutral
 Quad Length: Heel to buttock without losing pelvic/lumbar neutral or leg abducting
 Piriformis/External Rotation: Flex knees to 90. Allow fibias/feet to fall outwards, look for tightness or asymmetry. Should internally rotate at least 45°

Santa Cruz, CA 95062

56

Assessment: Special Tests for Licensed Healthcare Practitioners

- Flare Test w/without rotating discs
- Prone Deerfield Test: Distract Lower Extremities. Check Leg Length and medial malleolus in knee extension, check again in 90° knee flexion. Can indicate SI problem
- Vertebral Spring Tests: to rule out lumbar issues
- Pelvic Girdle/SIJTests: Gaenslen's, Thrust, Compression, Fig 4
- Pelvic Girdle Positions: Anterior/Posterior Rotation, Inflare, Outflare, Upslip, Downslip

58

Core Control Routine
For all Lumbar Pathologies

Diaphragmatic Breathing in all positions (Supine, Sidelying, Prone, Quadraped, Supported Standing, Standing)
 Eliminate Upper Lung Breathing
 Progress to Costal Breathing in all positions (use straps around ribs, tactile cues)
 Transversus facilitation in all positions. Have client palpate under lowest ribs with one hand and TA with other hand and eliminate use of external obliques with contractions
 Multifidus facilitation in Supine and Prone
 Teach Neutral Spine in all positions
 Progress to Neutral spine control from standing to quadraped and return.

59

The Good News...

If you are not sure what is going on....you can always teach breathing, core control activation, neutral or optimal spine alignment!

If they are not better in a few sessions, refer out to your chosen healthcare practitioner.

You can't hurt anyone with those instructions! (Hopefully ☺)

Herniated Nucleus Pulposus (HNP)

Definition: Herniated Nucleus Pulposus – HNP (Herniated or Bulging Disc)
Annular fibers weakened, nucleus loses volume and narrows

3 Stages:

1. Disc Bulge
 - a. posterior annular fibers tear due to repeated loading in flexion and/or flexion and rotation
 - b. nucleus may bulge sufficiently to cause pressure on the Posterior Longitudinal Ligament (PLL), causing pain
2. Proapsed Disc (extruded nucleus): outer annulus and PLL fibers give way, allowing nucleus to bulge into spinal cord
3. Sequestration: nuclear material has separated from the nucleus allowing it to be free in the neural canal

HNP

Symptoms: peripheral pain or numbness/tingling in buttocks, thigh, calf or toe; may present with a lateral shift; in more severe stages may present with lower extremity weakness and/or loss of deep tendon reflexes.

Contraindications: In acute stage or when any of the above symptoms are present avoid all exercises that include spinal flexion or vertical loading (seated, standing or inverted positions) of the spine. Avoid any exercise that involves a straight leg raise or strong spinal rotation

Suggested Exercises: HNP

Core Control Routine (In studio & HEP)
Start with Stability: Arm Arcs, Heel Slides, Dip the Foot in the Pool, Bent Knee Fall Out, Sidelying (Modified Sidekick), Prone Hip Extension, Prone Shoulder Flexion, Prone Pelvic Lift (Single Leg Kick) Quadruped Variations, Push Up-Modified.

Progress to Mobility of Spine: Prone Press Up (Pre-Swan), Pelvic Tilts, Pelvic Clocks, Bridging with Articulation, Side-to-Side, Sidelying Rotation, Book Openings

When all of the above is done with good form and pain free begin Dynamic Stability Exercises in all positions and standing.

Same as Osteoporosis Apparatus

68

Sciatica

Definition: A set of symptoms including pain that may be caused by general compression and/or irritation of one of five nerve roots that give rise to the sciatic nerve, or by compression or irritation of the sciatic nerve itself.

The pain is generally felt in the lower back, buttock, and/or various parts of the leg and foot. In addition to pain, which is sometimes severe, there may be numbness, muscular weakness, and difficulty in moving or controlling the leg. Typically, the symptoms are only felt on one side of the body.

Sciatica: Precautions/Contra-indications:

Avoid Spine Flexion until pain free.
Avoid "Hamstring Stretches"
Avoid long sitting positions.
Use small (straps, balls) or large apparatus (tower bar, trapeze) to support limbs for long lever work.
When pain free begin to add flexion.

Spinal Stenosis

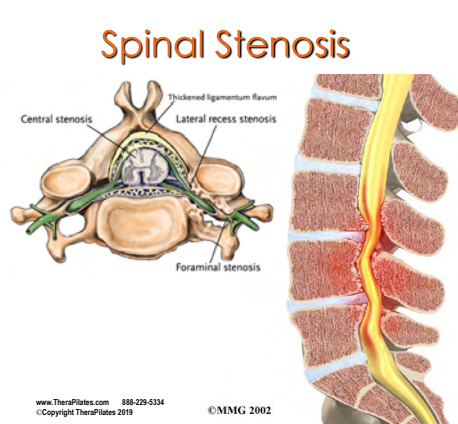

Definition: Narrowing of the spinal canal (central stenosis) or nerve root canals (lateral stenosis), compromising the spinal cord or nerve roots. Usually occurs in the lumbar spine but can also occur in the cervical and thoracic spine.

Symptoms: Symptoms typically aggravated by extension and include back pain, tingling, motor deficits (transient) and intermittent pain in one or both legs which is made worse by standing or walking (especially downhill).

Contraindications: Always avoid extension of the spine (or stenotic segment).

Spondylolisthesis

Definition: An instability most often at L5-S1 or L4-L5 due to a defect in the laminae causing anterior vertebral displacement.

Symptoms: Typically aggravated by extension activity. Minor injury causes acute pain with diffuse radiation into buttocks. Major injuries cause fractures in the laminae and can also cause serious spinal cord injuries.

Contraindications: Avoid extension of the lumbar spine* (at the spondylitic segment)

Stenosis & Spondylolisthesis Suggested Exercises

Core Control Routine (In studio & HEP)
Start with Stability: Arm Arcs, Heel Slides, Dip the Foot in the Pool, Bent Knee Fall Out, Sidelying (Modified Sidekick), Prone Hip Extension, Prone Shoulder Flexion, Prone Pelvic Lift (Single Leg Kick) Quadruped Variations, Push Up-Modified.

Mobility: Posterior Pelvic Tilts, Pelvic Rotation, Bridging with Articulation, Chest Lift, Rollups (start on Trapeze Table), Side-to-Side with feet down, Sidelying Rotation (Book Openings) Prone Extension (Thoracic Spine ONLY - Palpate Lumbar spine to keep it still)

Emphasize Thoracic Extension without Lumbar Extension (Spine Corrector, Baby Arc, Ladder Barrel, Massage Ball or Foam Roller)

Emphasize Hip Disassociation (Hip Extension without pelvic or lumbar movement)

83

Facet Syndrome

Definition: Characterized by a segmental hypomobility (facet lock) causing secondary hypermobile segments with pain and pain referral.

Symptoms: Often occurs with or because of disc degeneration. Usually painful with extension especially combined with rotation and sidebending.

Contraindications: Avoid extension of the spine*. (at the affected facet)

©Copyright TheraPilates 2019

920 41st Avenue
Santa Cruz, CA 95062

86

Facet Syndrome

If pain source is the facet joint a typical treatment is with denervation of dorsal ramus (Bogduk)
This also denervates the multifidus
Works really well the first time
Diminishing returns....and what about the multifidus for stability and core control?

www.TheraPilates.com 888-229-5334

Santa Cruz, CA 95062

87

Degenerative Disc Disease (DDD)

Definition: The gradual degeneration of intervertebral discs caused by repetitive stress on the spinal tissues leading to a loss of flexibility, elasticity and shock-absorbing properties.

Typical causes: wear and tear, aging, or trauma.

Consequences may be: disc space narrowing, osteophyte formation, disc bulging, or herniation.

www.TheraPilates.com 888-229-5334

Sacroilitis or Pelvic Girdle Dysfunction

Sacroilitis: Inflammation of the SI joint. Usually caused by one of the connective tissue diseases (e.g. ankylosing spondylitis, psoriasis).

Symptoms: pain in low back, buttocks, thighs

Pelvic Girdle Dysfunction: Origin is thought to be a disruption in the normal movement of the sacroiliac joint (too much or too little movement in the joint) Often provokes pain on one side. Often caused by Leg Length Discrepancy.

920 41st Avenue
Santa Cruz, CA 95062 **92**

Sacroilitis or Pelvic Girdle Dysfunction: Suggested Exercises

Core Control Routine (In studio & HEP)

Start with Stability: Arm Arcs, Heel Slides, Dip the Foot in the Pool, Bent Knee Fall Out, Sidelying (Modified Sidekick), Prone Hip Extension, Prone Shoulder Flexion, Quadruped Variations, Push Up-Modified.

Stay with Stability work for a long time.
If not successful, refer out to HCP.
Might need support belt or manual therapy corrections on a regular basis at first.

www.TheraPilates.com 888-229-5334
©Copyright TheraPilates 2019 TheraPilates® Physical Therapy Clinic
920 41st Avenue
Santa Cruz, CA 95062 **93**

Exercise Class Grouping

- ◆ Extension Bias Groups (HNP, Sciatica, Osteoporosis)
- ◆ Flexion Bias Groups (Facet Syndrome, Spondylolysthesis, Stenosis)
- ◆ Pelvic Girdle Syndrome- Neutral Not always easy to categorize

www.TheraPilates.com 888-229-5334
©Copyright TheraPilates 2019

1. Start with Stability

Start with all exercises in Neutral Spine
Teach disassociation of spine from hip and spine from shoulder
Maintain Tr Abdominus contraction and Axial Elongation during all exercises

- Footwork
- Feet in Straps
- Arm Arcs
- Quadruped
- Leg Circles

www.TheraPilates.com 888-229-5334
©Copyright TheraPilates 2019

2. Progress to Mobility

When all exercises are symptom free in neutral then begin to add mobilization exercises for the spine starting in supine in one plane such as:

Flexion/Extension-Sagittal (Bridging, Rolldowns)
Sidebending-Frontal (Sidebending on Barrel)

Rotation-Transverse then progress to more advanced combined movements (Side to Side/Pendulum Pelvic Clock then Spine Twist)

www.TheraPilates.com 888-229-5334
©Copyright TheraPilates 2019

3. Advanced Dynamic Movements

When all stabilization and mobilization exercises are symptom free then begin to add Advanced Dynamic exercises in combined planes of movement like:

- ◆ Mermaid with Rotation
- ◆ Saw
- ◆ Reformer Short Box facing side (Pearl Diver), Snake and Twist

920 41st Avenue
Santa Cruz, CA 95062

My favorite MAT Pre-Pilates Exercises:

- Arm Arcs
- Heel Slides
- Dip Foot in Pool
- Bent Knee Fall Out
- 90/90 Lower Abs
- Bridging w/or without articulation
- Bridge with Marching
- Sidelying
- Side Lift
- Single Leg Kick (modified) Prone Pelvis Lift
- Prone Hip Extension
- Quadruped-Neutral & Pregnant Cat Breathing'
- Quadruped-Shoulder Flex & Hip Ext
- Push Up- Modified on knees or hands on Table

www.TheraPilates.com 888-229-5334
©Copyright TheraPilates 2019

920 41st Avenue
Santa Cruz, CA 95062

98

MAT Standing Work:

- Pelvic Floor Plies in Neutral Pelvis
- Wall Squats
- Marriage Proposal Lunges
- Hip Extension & Calf Stretches
- Single Leg Standing
- Single Leg Knee Bends
- Sit to Stand off Desk Chair without lumbar movement

**Standing work needs to be in all Classes!*

Additional Considerations:

Simulate functional or sports activities
Be sure to encourage cardiovascular activity 3x week
Encourage water intake
Encourage good nutrition (especially Calcium & Vitamin D)
Discourage smoking & excessive alcohol consumption (more than 1 drink per day)

Pilates Method Alliance

The Pilates community at large has joined together in an effort to identify and preserve the comprehensive work of Joseph and Clara Pilates.

The PMA believes that Pilates should evolve along with the advances in movement research and modern science.

The PMA developed a 3rd party accredited certification program in 2005 to establish national entry-level standards in an effort to protect the public and ensure quality of instruction.
